Art Unit: 3662

1. The drawings are objected to because the boxes in fig. 1, 2A, 3A, 4A, 5, 6A and 8 need to be labeled. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. Claims 1-18 are allowed.

3. The following is an examiner's statement of reasons for allowance: the examiner found no teaching in the prior art that would render obvious the claimed array antenna and a method of producing a digital beamformer signal using output signals generated by an array of antenna elements in response to the reception of electromagnetic waves including "each antenna module multiplying the complex digital antenna signal with a complex beam coefficient generating a complex beam element signal at a second data

rate; asynchronously adding the generated complex beam element signals in groups comprising at least two antenna modules forming a complex beam signal by means of complex adders on the respective antenna modules being intercoupled to form respective serial asynchronous complex adding chains; providing the digital beamformer signal from the complex beam signal", claim 1, "a multiplier arranged to multiply the complex digital I and Q signals with a complex beam coefficient forming a complex beam element signal at a second data rate; an element latch arranged to freeze the complex beam element signal by a clock signal to form a latched complex beam element signal; an asynchronous complex adder arranged to add the latched complex beam element signal with an input complex part beam signal, forming an output complex part beam signal; and in that the output part beam signals of one antenna element module is coupled to the input complex part beam signal of a further antenna element module thus forming a serial asynchronous summing path of the latched complex beam element signals of the antenna element modules generating a complex beam signal", claim 9:

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
